Getaway

Been There, Done That

Project Charter - Team 12
Date: 18th January 2019

Team members:
- Aldio Ngudjiharto
- Avinash Singh
- Daniel Larken
- Dhriti Chawla
- Stefany Felicia Gunawan Go

Project Coordinator: Pongthip Srivarangkul

Problem Statement:

Exploring new places around the world has become easier with the help of online resources like Google Maps. However, when it comes to knowing the insider tips for even the remotest places, we're lacking. Gaining tips from people who have already visited certain places could prove beneficial to a lot of travel buffs and it would help them plan their trips by foreseeing the problems they could encounter and in turn, planning ahead. *Get Away* aims to connect prospective travelers to people who have already visited a certain place thus enabling them to gain valuable knowledge from the insight of their 'travel guides'. This would help people plan accordingly and gain sufficient knowledge regarding a place before they even visit it ensuring a safe and enjoyable trip.

Project Objectives
- Build an iOS application to help users connect with one another.
- Using the app, users can meet other users who have more information about the places they are interested to travel to.
- Create personalized profiles for each user which indicates more information about the user's travel history and the number of connections which indicates reliability.
- Generate a map marked with places where users have visited so users can easily navigate.
- Allow users to interact with other users using in-app chatting features.

Stakeholders
- **Users:** The possible users for our app would be travelers willing to explore the beautiful world, as well as travel hosts who'd like to be of help to the travelers by sharing their knowledge regarding places

Getaway

Been There, Done That

- **Developers:** Aldio Ngudjiharto, Avinash Singh, Daniel Larken, Dhriti Chawla, Stefany Felicia Gunawan Go
- **Project Owners:** Aldio Ngudjiharto, Avinash Singh, Daniel Larken, Dhriti Chawla, Stefany Felicia Gunawan Go
- **Project Coordinator:** Pongthip Srivarangkul
- **Team Leader:** Stefany Felicia Gunawan Go

Deliverables

- An iOS app that will show a map with markings on places where the users have visited.
- Use Xcode and Swift to develop the iOS app.
- A user account system allowing users to create unique usernames and signing up using Facebook or Google OAuth.
- Social media outlet to connect people based on places they have visited
- Develop a Firebase database to store user profiles, countries/cities the users have visited, chat history, and other user data
